MYTHILI S N

Bengaluru | +91 9886518175 | mythilisn15@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science and Engineering student with hands-on experience in software development, AI/ML engineering, and intelligent systems. Proficient in Python and C++, with experience in backend development, REST APIs, Object-Oriented Programming, and real-time computer vision applications. Strong foundation in Data Structures and Algorithms, with practical exposure to Generative AI, LLM-powered applications, and AI-assisted development. Passionate about building secure, reliable software solutions and continuously exploring emerging technologies.

EDUCATION

Bachelor of Engineering (B.E.), Dayananda Sagar Academy of Technology and Management **CGPA: 9.43/10**
Computer Science and Engineering (2023 – 2027)

TECHNICAL SKILLS

Languages : Python, C++, C, SQL, JavaScript.
Web Frameworks & APIs : Django, Streamlit, REST APIs, HTTP, JSON/XML parsing, HTML, CSS.
AI/ML : Machine Learning, YOLO, SAM, EfficientNet, PyTorch, OpenCV, ONNX, NumPy, Pandas.
Computer Vision & Real time Systems : Gremsy PayloadSDK, MAVLink, RTSP Streaming, GStreamer, PID Control, Object Tracking.
Core : Data Structures and Algorithms, Object Oriented Programming (OOP), DBMS, OS, Computer Networks.
Tools : Git, GitHub, Google Colab, VS Code, Linux/Ubuntu, MySQL.

EXPERIENCE

Computer Vision Intern – Yottec Systems (UAV Team | Defence Sector) *Aug 2026*

- Built a real-time target-tracking system in C++17 (OpenCV, Gremsy PayloadSDK) that drives a two-axis gimbal with PID control to follow selected targets.
- Optimized data pipeline streaming throughput by embedding custom YOLOv11 networks into live RTSP/GStreamer video feeds, debugging critical connectivity bottlenecks.
- Trained a YOLO26s person detector on a custom aerial dataset (PyTorch, Ultralytics, Colab).
- Collaborated directly with hardware and cross-functional teams to capture technical criteria and translate complex requirements into robust operational software.

PROJECTS

Wound Progression Tracker | *AI-Powered Healthcare Analytics System* | Github Jun 2026

- Built a Python-based computer vision system for wound segmentation and healing progression tracking, with a full-stack dashboard for visual monitoring.
- Benchmarked and debugged model inference speed and system throughput, using Git for structured, milestone-based development.
- Independently designed and tested the complete pipeline, integrating deep learning models for feature extraction and trend analysis.

connectR | *AI-Integrated Community Notes Platform* | Github Jan 2025

- Developed a Python/Django web platform with REST APIs for uploading, requesting, and exploring academic notes, as part of a 4-member Agile team.
- Integrated AI-powered summarization, hashtag generation, and quiz creation from uploaded notes to enhance learning efficiency.
- Designed relational MySQL models and debugged backend APIs (JSON responses) with secure authentication and session management.

ACCOMPLISHMENTS

- Rank 1,142 among 35,000+ developers, HackerRank Orchestrate Hackathon 2026.
- Completed "The Complete Python Bootcamp: From Zero to Hero in Python" on Udemy, covering Python fundamentals, problem solving, data structures, and application development concepts.
